

BUILDING & STRUCTURAL SUPPORT DESIGN

egniol

Our engineers provide a broad range of civil and structural engineering design services across a variety of industry sectors. With their attention to detail and dynamic approach you can be sure you will get a practical design solution and cost effective service.

Building and structural support design requires a closely integrated team of engineering experts to work together from initial concept through to the final design for construction. Our team has worked on a wide range of domestic, commercial and industrial projects.

EXAMPLES OF THE BUILDING AND STRUCTURAL SUPPORT DESIGN SERVICES THAT WE OFFER ARE:

- Temporary works design
- Structural condition reports
- Subsidence assessment
- Feasibility studies
- Detailed design
- Sheet piling foundation and retaining structures
- Construction oversight and supervision
- Construction phase health and safety audits

Our structural engineers work closely with our ground engineers and health and safety specialists to ensure that our design solutions meet the project requirements. They are experienced with all the commonly used construction materials, including concrete, steel and timber, and are fully conversant with the relevant UK design regulations, standard and codes ensuring that your design solution is fully fit for purpose.
