

CONTAMINATED LAND ASSESSMENT AND REMEDIATION

egniol

Our contaminated land expertise brings together our experience of ground investigation, geology, geotechnical engineering and hydrology and hydrogeology, together with our detailed knowledge of the planning and regulatory regimes, to offer a comprehensive service for the assessment and remediation of contaminated land.

OUR SERVICES INCLUDE:

- Desk Studies and Site Walkovers (Preliminary Risk Assessments)
- Intrusive and Non Intrusive Site Investigations
- Quantitative Human Health Risk Assessments
- Groundwater Contaminant Fate and Transport Modelling
- Landfill Gas and Soil Vapour Surveys and Assessments
- Geotechnical Investigations and Appraisals
- Remediation Option Appraisals and Design
- Remediation Specification and Contract Procurement and Management
- Remediation Supervision and Verification
- Site Waste Management Plans
- Material Management Plans
- Hazardous Waste Classification

Our engineers identify the challenges presented by the ground and develop effective, economic technical solutions.
