

DEMOLITION AND DECOMMISSIONING

egniol

The demolition and decommissioning of a structure is as critical as any part of its design or operation, yet is often over-looked. We ensure that the design of the structure takes account of the future demolition and decommissioning to ensure that it can be undertaken efficiently and, most importantly, safely.

Demolition and decommissioning are often the most hazardous parts of any project. The removal of existing buildings and structures is often the first step in the regeneration of brown field sites. Working closely with our in house health and safety experts we make sure that the health and safety requirements of every aspect of work are fully understood and addressed.

OUR DEMOLITION AND DECOMMISSIONING SERVICES INCLUDE:

- Asbestos surveys
- Waste Management Plan preparation
- CDM advisory services, including support to Principal Contractor
- CDM Principal Designer
- Contaminated land assessment
- Structural stability assessment
- Demolition tender and contract preparation
- Oversight and supervision of site works

Demolition and decommissioning is a complex and dangerous process which requires a competent team of engineering, project management and health and safety specialists to work seamlessly together. Egniol has the knowledge and experience to deliver your project.
