

ENGINEERING DESIGN

Our engineers take pride in the consultancy services we offer. With their attention to detail and dynamic approach you can be sure you will get a practical design solution and cost effective service.

OUR ENGINEERING DESIGN SERVICES INCLUDE:

- Civil Engineering
- Structural Engineering
- Infrastructure Design
- Property Development
- Geotechnical Engineering
- Environmental Engineering

EXAMPLES OF THE TYPES OF PROJECTS WE HAVE UNDERTAKEN IN RECENT YEARS INCLUDE:

- The design of new commercial buildings to accommodate processing equipment
- Improving the fabric of existing commercial buildings
- Specifying waste handling equipment and improving the layout of waste handling facilities
- Surface water management designs to comply with EA and SEPA discharge consents
- Site and buildings assessment as part of a due diligence process
- Supervising the de-commissioning, removal and re-installation of mechanical plant
- Designing and tendering a Refuse Derived Fuel preparation plant within an existing building
- Designing access roads, retaining walls, ground slabs and associated drainage systems and other infrastructure
- Design of a temporary structural support to a failing roof
