

# HYDROLOGY AND HYDROGEOLOGY

egniol

We recognise that water is our most precious resource and that the movement, distribution and quality of our water must be managed respectfully and sustainably now and in the future. This is reflected in the approach taken to the management of water by UK regulatory and planning authorities.

Our hydrology and hydrogeology expertise brings together all the skills that are needed to manage our water environment. Our engineers work with the technical challenges of managing groundwater and surface water to enable a wide range of development whilst maintaining a clear focus on safeguarding the environment and our water resources.

## OUR SERVICES INCLUDE:

- Water Utility Infrastructure
- Regulatory Compliance
- Water Resource Planning
- Catchment Management
- Flood Risk Assessment and Management
- Surface Water and Drainage
- Sustainable Urban Drainage Solutions

Our engineers are expert in dealing with water management challenges across a wide range of projects and are used to working closely with the regulatory bodies to produce the right water management strategies and secure the necessary consents to allow development to proceed.
